FRESH ASPARAGUS

The cultivation of asparagus in the Peru began at the beginning of the Decade of the 50, starting production in the Department of La Libertad. Started with the variety called Mary Washington, used to produce canned white asparagus. In the year 1986, ICA began a production program of green asparagus for export, where it was stored: fresh, chilled and frozen.

Process:

To grow the plant, which is of utmost importance for the feeding of human beings all over the world. We begin by preparing the ground for the nursery, which is done in a small amount of land with the softer Earth possible, so that way you can go out without any difficulty.

A year is it nicknamed for the second time, but this time we already harvest at least a month and then again is left to mature and finally is nicknamed every three months to establish their continuous harvest.

Description:

Asparagus is a great vegetable nutrient composition. They have high percentages of many basic nutritional issues for anyone. They are rich in water, low in fat, have many proteins and also provide fiber greatly.

Scientific Name
